Digital Front Door — External Agency Form (Built)

plan implementation

FILES CREATED	FORM FIELDS
1	8
AUTO-FILL PARAMETERS	**ORG CHANGES**
8	0

Next Steps to Go Live

1. Push index.html to a GitHub repo and enable GitHub Pages 2. Add your GitHub Pages URL to Salesforce CORS Allowlist (Setup → CORS) 3. Copy your Embedded Messaging snippet from Setup → Embedded Service Deployments → Get Code 4. Paste it into the placeholder in index.html (replacing the commented block) 5. Test with the handoff URL from your DFD portal

Test URL

Open `index.html` locally or on GitHub Pages with this URL to see the auto-fill in action:

```
?fname=Jane&lname=Doe&email=jane%40doebakery.com&sso_id=SSO-98765&biz_type=LLC&purpose=Equipment%20Purchase&amount=25000&employees=8
```

What Was Built

A standalone Department of Labor grant intake form with green/slate government branding, completely distinct from the Salesforce DFD portal. The page parses URL query parameters on load and auto-fills all 8 form fields with a visible green glow animation so demo observers can clearly see the data handoff in action. A status banner and toast notification confirm the pre-fill occurred. The MIAW snippet placeholder is ready for the actual Embedded Messaging code.
